

How to heat the flat (Part 3 of 3)

Every room is fitted with a electric Dimplex Quantum QM150 Storage Heater.

USING THE HEATER NOW !

A = The LCD (display) screen
B = The three push buttons
C = The Dial and Select button

Setting the Timer for when the heating comes on

Using the LCD, click on Menu and turn the dial to Timer.Mode and gently press (click) the Dial to choose option

Turn the Dial to either “Out All Day” and “Home All Day” and click to choose.
Click on “Select” to choose/confirm this option

The “Advance” function

Using the LCD, click on “Menu” and go to the “Advance” function to begin the next ‘Comfort On’ mode early.

If the heater is in ‘Comfort On’ and you don’t want heat, press the Advance button and it will go off until the beginning of the next ‘Comfort On’ period

The “Boost” function (**I need heat now !**)

Using the LCD, click on “Menu” and go to the “Boost” function to provide additional room heating (Eg, due to unusually cold weather).

In this instance, the Dial controls the temperature

You can select how long the boost will run for, from one to four hours. Once the boost has run for the selected time it will automatically switch off.

Note: Boost element uses peak rate electricity and this could lead to increased running costs.
